

## **Best Business: Harvest**

April 25, 2011 - Green Buildings

Harvest manages organic waste using advanced technologies to produce renewable energy and high value soil and organic fertilizer products. The company gains control of waste streams through partnerships in key local markets, and uses its own technologies and those of others to generate natural gas and electricity. Harvest is transforming the organic waste business by extracting maximum value from these waste streams.

Harvest is a destination employer for more than 150 people in the US and Canada. We believe in the importance of sustainability, results, quality, integrity and workplace safety. The team is dedicated to harvesting waste materials and beneficially re-using organic materials, turning them into soils, fertilizers, energy, and engineered fuels. Today we successfully divert over 425,000 tons of organic material from landfills, in conjunction with our retail and municipal partners in the US and Canada.

Harvest was recently named to the Cleantech 100 (Top Global Cleantech companies) and was named "Emerging Company of the Year" by the New England Clean Energy Council.
