

SWBR Architects serves as lead architect for \$23 million Marcellus School District project

January 04, 2008 - Upstate New York

SWBR Architects has completed its work at the Marcellus Central School District located at 1 Mustang Hill. The two-phase design, which began in 2003, incorporated a new synthetic field with lighting and bleachers, a bus garage and an addition to the middle school.

SWBR Architects served as lead architect on the \$23 million project and designed a new synthetic field that includes lighting and bleachers that will be used primarily for football and track. Additionally, SWBR Architects designed a new bus garage that is double in size and provides offices for bus personnel as well as building and grounds personnel. Sack & Associates Consulting Engineers, PLLC, provided engineering services for the bus garage expansion.

As part of phase two, SWBR Architects designed a 44,000 s/f expansion to the middle school that included a new gym with an indoor running track, a student commons area, classrooms and fitness rooms. In addition, SWBR expanded the cafeteria, kitchen and serving areas. SWBR worked closely with M/E Engineering and Parrone Engineering, who handled all the site work including accommodating electrical, mechanical and plumbing needs.
