

## **Inscape wall products awarded GREENGUARD Certification**

September 26, 2011 - Green Buildings

According to Inscape Corp., its Addwall, Inform and Reform movable wall products have been awarded GREENGUARD Indoor Air Quality Certification and GREENGUARD Children & Schools Certification. Both GREENGUARD Certifications signify that these products are now in compliance with the stringent chemical emissions guidelines set by the GREENGUARD Environmental Institute (GEI).

Addwall is a flexible movable wall solution that seamlessly integrates scalable functionality and aesthetics into a single wall. Combining the best features from two existing systems, Addwall addresses both the needs of customers who desire a basic, cost-effective solution, as well as those who require high functionality and a refined aesthetic. Addwall allows clients to start with a basic wall panel and add function and aesthetics only where they need them. Inform and Reform are Inscape wall products with a large installed client base. "GREENGUARD certification of our wall products enables Inscape to provide systems, storage and wall products that contribute to healthy workspaces," said David Parshad, VP, product design and development. "Knowledge workers spend a large percentage of their day in office environments. Inscape is committed to providing product solutions that preserve the air quality of those workspaces."

Inscape's portfolio of architectural products creates workplace solutions that balance aesthetic, functional, environmental and economic considerations. Inscape products provide space division for the entire office landscape, from basic offices and collaborative spaces that require simple, acoustic enclosure to executive offices and boardrooms where additional function and aesthetics are required. Refined detailing, clean profiles, a wide range of aesthetic options, integrated modular power interior cable routing and the ability to integrate systems furniture provide flexibility to easily create attractive, intelligently designed spaces today while allowing clients to cost-effectively redefine space as requirements change.

The GREENGUARD Environmental Institute aims to protect human health and improve quality of life by enhancing indoor air quality and reducing people's exposure to chemicals and other pollutants. All certified products must meet stringent chemical emissions standards based on established criteria from key public health agencies. GREENGUARD Certification is broadly recognized and accepted by sustainable building programs and building codes worldwide.
