

Bohler Engineering provides stability and offers a streamlined, innovative process

March 17, 2008 - Long Island

Large consulting engineering companies provide stability. Smaller firms offer a streamlined, innovative process. At Bohler Engineering, we bring our clients the best of both worlds.

Bohler Engineering is a multi-disciplined civil engineering firm with a staff of licensed, experienced professionals in 12 offices serving the Eastern United States. With offices located in Massachusetts, New Jersey, New York, Pennsylvania, Maryland, Virginia and Florida, we bring clients the immediate attention they need. Bohler provides far more than civil engineering, including project management, site planning and design, surveying, telecommunications engineering, permit expediting and landscape architecture.

Bohler Engineering is recognized as a leader in a vast range of industries, including: large format and category retailers, office and industrial development, warehouse and distribution facilities, petroleum retailers, residential development, hotels, supermarkets, financial institutions, mixed-use planning development, theme/sit-down restaurants, quick-serve and drive-thru restaurants, self storage facilities, as well as hospital/medical buildings.

Fortune 500 companies repeatedly select the firm for their new projects. Bohler's reputation is built on quality. Quality joins customer service, staff development, efficiency and business development, comprising the firm's core values, which are observed by every employee, instilling a culture of excellence throughout every aspect of our projects.

The firm distinguishes itself from other civil firms in their commitment to staff development. Continuing education, both on and off-site, is supported and strongly encouraged to enhance the technical and professional skills of all employees. A broad range of courses and seminars are offered, challenging employees to incorporate new skills and technology into their work. Clients can be confident in choosing Bohler for their projects because they will have knowledgeable engineers who are updated and trained on advances in the industry.

As an investment in the future, a sophisticated cooperative education and internship program that encourages students to explore their chosen career path was created. The curriculum allows students to work side by side with our engineering professionals and observe how they handle routine as well as unique job situations in the field of land use design and planning. Our talent acquisition team aggressively recruits interns as well as proficient employees to meet the demands of Bohler's impressive growth rate. Some of the brightest college students are attained through this program and benefit from soft skill as well as technical training during their exposure to the professional work environment.

Bohler invests in and implements new technologies to meet client demands and remain on the cutting edge in the business world - from our communication tools such as Blackberries, intranet applications, and GPS systems to innovative software including 3-D modeling, computer-generated

color exhibits, robotic survey instrumentation, traffic simulation, and telecommunications engineering.

Clients also are afforded an opportunity to benefit from our longstanding relationships with jurisdictional agencies' planners, zoning and building officials, which have been cultivated over years of interaction and maintaining a reputation of quality and integrity. This in turn results in expedited development applications and permitting. Our project managers and permit coordinators have a deep understanding of local planning issues and regulations, saving clients time and resources. They are also very well respected for their expertise and performance record.

Bohler is also distinctive in that we have a specialized telecommunications group. As the telecom industry continues to evolve and expand, the need to update the infrastructure is more urgent than ever. The networks for tomorrow need to provide "any-to-any" and "anywhere-to-anywhere" connectivity options. The telecom division was established by the firm in an effort to address our clients' needs in this area and conveniently provide this additional service in house.

Clients truly get comprehensive service when they choose Bohler Engineering. Our customer service is exceptional. With a performance record of more than 15,000 successful projects and expertise provided by well trained, highly qualified employees, a culture of excellence has been created. Employees make it their business to understand the client's business. The client's project truly is our business.

Robert Lauro is the principal of Bohler Engineering's Ronkonkoma and White Plains offices.
