

Veolia and Wheelabrator Technologies renew supply agreement

April 21, 2014 - Front Section

Veolia Energy North America, one of the leading operator and developers of efficient energy solutions, and Wheelabrator Technologies Inc., a renewable waste-to-energy company, have extended their 28-year partnership after the two companies recently completed a contract renewal. The "Green Steam" - steam generated by renewable energy - produced by Wheelabrator's Baltimore facility supplies 50% of the steam Veolia delivers through its extensive Baltimore district energy system.

The continued supply agreement between Veolia and Wheelabrator helps to reduce Baltimore's total greenhouse gas emissions by 47,000 tons per year or the equivalent of removing 8,400 cars from the road.
