

Norco Construction completes build-out of new 10,000 s/f Tavern on the Green

May 12, 2014 - Design / Build

Norco Construction has completed the build-out of the new 10,000 s/f Tavern on the Green restaurant designed by architect Richard Lewis, marking a revival for the 150-year-old iconic Central Park dining space.

Norco fitted the high-end space with luxurious finishes including marble countertops and aged wood flooring, panels and trusses to match the style and old-line charm associated with the Tavern on the Green name. The firm also installed elegant chandeliers and lighting fixtures to compliment the restaurant's sophisticated interior, while fashioning the exterior with a refined façade, lampposts of the highest quality and a graceful canopy to welcome guests.

In addition, Norco effectively installed the landmark building's infrastructure, including complete mechanical, electrical and plumbing systems, to ensure restaurant operations would begin on time and run efficiently.

Norco developed a comprehensive construction calendar and displayed superb project management ability to overcome the project's complex schedule, which called for Norco's contractors and New York City contractors to be operating simultaneously at the restaurant with upwards of 150 tradesmen all working towards the same end-result. Norco's resourcefulness, effective communication with city contractors and aggressive approach to executing the construction calendar allowed Norco to complete the project before the deadline, giving the restaurant ample time to prepare for its grand reopening.
