

utiliVisor introduces its new website

October 27, 2014 - Green Buildings

A new website that highlights its energy advisory services for building owners, institutions, and marine companies has been introduced by utiliVisor (www.utilivisor.com).

The leader in continuous energy oversight and submetering services, utiliVisor provides web-based monitoring systems that enable chiller, boiler, and combined heat and power plants to be optimized, resulting in energy savings. Built on open standards, the utiliVisor platform collects and formats operations data in real time and defined time frame increments, monitors operations and equipment errors, and delivers oversight via web-based alerts and alarms. Based on the information generated, engineers located in utiliVisor's operations center are able to track performance and remedy any malfunction in order to create energy efficiencies.

The new utiliVisor website highlights the company's offerings, including Energy Plant Services, Energy Metering Services, and Marine Services. Links to case studies illustrate the dramatic energy savings that utiliVisor solutions have achieved for its clients, including commercial building owners, hospitals, universities, pharmaceutical companies, and marine companies. The utiliVisor mobile app, which enables customized energy information displays to help keep track of real time facility operations data from any remote location, is also highlighted.

"At a time when building owners, facility managers and ship owners are under increasing pressure to cut energy costs, utiliVisor has developed proven solutions that result in significant savings," said Tim Angerame, Chief Operating Officer. "Our new website reflects the continuing evolution of the company, as we embrace and perfect new technical approaches that enable our clients to achieve lasting energy efficiencies."

Founded in 1978, utiliVisor offers comprehensive energy monitoring and submetering services, providing accurate, reliable solutions to boost efficiency and lower energy consumption. The utiliVisor system is a web-based, networked solution, built on open standards, that works in real time to collect and format data, monitor operations and equipment errors, and deliver oversight via web-based alerts and alarms. UtiliVisor services more than 250 million square feet of commercial and institutional space nationwide and oversees more than 225,000 service data points, more than any other service provider in the United States. It is also the largest submetering company in the tri-state New York metropolitan area and an approved Meter Data Service Provider (MDSP) for the State of New York. (www.utilivisor.com).
