

Dormitory Authority of the State of New York completes \$16 million renovation of Tower Three at SUNY Buffalo State College

October 01, 2019 - Upstate New York

Buffalo, NY According to governor Andrew Cuomo, the \$16 million project to renovate Tower Three at SUNY Buffalo State College has been completed. This project is part of \$73 million in capital renovation projects the Dormitory Authority of the State of New York (DASNY) is completing on SUNY campuses statewide. The project was financed through DASNY's SUNY Dormitory Facilities Program, which issues low-cost, tax-exempt bonds supported by student residence hall fees.

"Higher education is one of the most important investments we can make in our communities and our state," governor Cuomo said. "By providing campuses with state-of-the-art facilities like the revamped Tower Three at SUNY Buffalo to house and teach future leaders, we can ensure the Empire State continues attracting the best talent."

This is the third tower capital renovation project DASNY has completed for the college. The project was completed in time for the start of the fall semester. DASNY's work included modernizing 36 suites, which house six students each. The suites received fresh paint, new built-in wardrobes in the bedrooms, luxury-vinyl tile floors, and upgraded television and Wi-Fi access. Suite bathrooms were completely transformed, embracing privacy, while taking on a more residential-style look and feel. Students will notice contemporary new finishes, ceramic tile floors and walls, and new solid-surface showers and countertops.

On the 10th floor, a new lounge boasts views of the city, in addition to amenities such as a new kitchen, lounge seating areas, work spaces, and bathrooms. A similar lounge is located on the first floor along with a handicap-accessible bathroom, new staff offices and finishes throughout, as well as a two-bedroom apartment for the resident director.

In the basement, students will find a new laundry room with washers and dryers, as well as a computer room equipped with power and internet connectivity.

New heating and ventilation systems were installed to ensure safe and healthy building conditions are achieved. All the residences mechanical equipment, generator, electrical, and fire alarm systems have been modernized and upgraded to meet clean air and lead-free water standards.

The Tower Three project was constructed to LEED-Silver standards. Some of the LEED elements include equipping bathrooms with water-efficient plumbing fixtures to reduce indoor water usage,

energy-saving LED lights and low mercury lamps, and a bicycle storage area to reduce the need for automotive transportation. As of August 20, 2019, 46 DASNY projects have received a rating of LEED Certified or better, helping to reach statewide energy goals to build a clean energy future for all of New York State.
