

DeSimone Consulting Engineers aligns with Henderson Rogers Structural Engineers

May 19, 2020 - Design / Build

New York, NY DeSimone Consulting Engineers, a full-service engineering firm with offices worldwide, has aligned with Henderson Rogers Structural Engineers, a Texas-based structural engineering firm specializing in aviation, education, commercial, sports and healthcare facilities. The move provides greater resources to Henderson Rogers while expanding DeSimone's geographic reach.

DeSimone is an acknowledged leader in structural engineering, forensics, facade consulting, and construction and environmental risk management, providing services for the most complex projects in the United States and around the world. Henderson Rogers' presence in Texas positions the two companies to expand structural engineering, facades and forensics work in Houston and the Southwest.

Henderson Rogers, a WBE firm, will continue to be led by founding principal and president K. Elaine Rogers, and the firm will remain at its current address at 2603 Augusta Dr. in Houston. DeSimone's Houston forensics team will operate from Henderson Rogers to leverage the two companies' deep experience and to maximize opportunities in the fast-growing market.

"We are excited to join forces with Henderson Rogers to power additional growth in Texas," said Stephen DeSimone, president and CEO of DeSimone Consulting Engineers and IREON Member. "We have continued to scale our business to provide new services and reach new clients, and this alignment further advances our ability to provide superior engineering services across all regions and service lines."

"Our team welcomes the opportunity to leverage the resources and service lines of the DeSimone platform in Texas," said Rogers. "We believe this move significantly increases our collective ability to provide value at all points in the lifecycle of our clients' projects."

DeSimone's façade consulting division works from concept to completion to address exterior building facade components, including roofs, walls, windows and waterproofing. The forensics department offers customized investigations, such as buildings and equipment, complex property and liability losses, and builder's risk.

The company's construction and environmental risk management team collaborates with DeSimone's design engineers and forensics consultants to identify and deliver end-to-end risk

management solutions that support effective decision making.

Established in 1969, DeSimone provides structural engineering services for the most complex projects around the globe. The company has been engaged in strategic expansion during the past several years, adding departments focused on forensics, facade consulting and construction and environmental risk management.
