

Gamco Corp. launches new products

August 24, 2021 - Design / Build

Queens, NY Gamco Corp., a leading New York area fabricator of fenestration and architectural metals, has embarked on a major company initiative to launch a series of new fenestration products over the coming months as the company marks its 35th year of operation. Key to the new product development is greatly improved thermal performance. Through these new products, Gamco reaffirms its commitment to energy efficiency and is positioned to maintain its leadership position among NY regional fenestration fabricators.

Gamco is gearing up to supply new construction and renovation building projects with the energy efficient fenestration they require now and in the future. The Gamco effort is underway and is illustrated by the recent launch of its new thermally enhanced aluminum CW250P curtain wall line. The new curtain wall product features a structural polyamide thermal-break pressure bar which dramatically improves its energy efficiency over previous models.

Other new products Gamco is planning for introduction include an improved aluminum storefront framing system, a commercial glass door, and an all new window wall system. Advanced energy efficient design is a key feature of all the new products.

“We had intended to start this initiative last year, in 2020, but it had to be put on hold,” said David Hsu, Gamco sales manager. “During the pandemic, we concentrated our efforts on critical projects like the Montefiore Hospital New Rochelle’s new emergency room entrance and the new Invisiguard upscale glass barrier system for sales counters, reception areas, offices, and other applications. This is the right time for Gamco to step forward with these new improved products.”
