

## **AtmosAir Solutions and A&D Entrances announce installation of the first ‘Elev-Air’**

December 13, 2022 - Owners Developers & Managers

New York, NY AtmosAir Solutions, a leading indoor air purification company and A & D Entrances, an elevator cab and entrance manufacturer servicing the New York Tri-State area, has completed the first installation of its Elev-Air elevator air purification product in the Flatiron Building. The Elev-Air is an important health and wellness advance in commercial office building elevators. As employees start returning to offices, indoor air quality in the workplace, and particularly in elevators, where people are confined in a small space, are major concerns. Elev-Air, added to commercial office building elevator cabs, feature bi-polar ionization technology, that proactively emits ions 24/7 into elevator air helping neutralize airborne viruses, germs, mold, volatile organic compounds (VOCs) and is tested highly effective at stopping the spread of coronavirus.

“As office buildings reopen after being shuttered by COVID-19, commercial office owners are seeking to not only provide a healthier indoor environment, but to also regain the trust and confidence of returning employees,” said Steve Levine, president and CEO of AtmosAir Solutions. One major concern is not only indoor air quality in the workspace, but in elevators where many people are crowded and contained into a small space. Elev-Air will provide a more protected indoor environment in elevators for office workers, we are thrilled to bring this product to our customers.”

“We are excited to bring the Elev-Air product to the market to help ensure the safety of office workers,” said David L Viteri, president, A & D Entrances. “COVID-19 overwhelmed our country, shutting offices down and forcing many employees to work from home. The need to have employees return to the office was on every employer’s mind. The challenge: how do you make going to the office safer in a closed environment such as the elevator? Thus, the idea of cleaning the air in our elevators was born. We’ve partnered with AtmosAir Solutions, which has the best product on the market and with its bi-polar ionization technology, to make the confines of the elevator healthier.”

Elev-Air is being installed in six additional office buildings owned by Columbia Properties. Elevators can now be outfitted with Elev-Air, to maintain optimal air quality like the spaces in other areas of the building.

At 22 stories and 307 ft., the Flatiron building is in the Flatiron district of Manhattan at the intersection of Fifth Ave. and Broadway.

The Flatiron Building is one of the most distinctive and photographed building in New York City. Its triangular shape was designed by Chicago architect Daniel Burnham and built in 1902.
