

JRM Construction completes Galaxy Digital's office space

July 25, 2023 - Front Section

Manhattan, NY JRM Construction Management announced the completion of Galaxy Digital's office space. The project, designed by Young Projects, reflects the unique culture of Galaxy Digital, a leader in digital asset and blockchain technologies.

Galaxy Digital's new 36,000 s/f office represents a departure from traditional workspaces. The project features highly curated architectural elements, including the elevator vestibule, lobby entrance, work café, and central offices. Young Projects' design choices, implemented by JRM Construction, have made the space into an environment that fosters collaboration, creativity, and a sense of liveliness.

"We are thrilled to have collaborated with Galaxy Digital on this exciting project, which marks a significant milestone for both JRM Construction and our client. Young Projects' innovative design, brought to life by JRM Construction, aimed to create an office space that inspires collaboration, sparks innovation and fosters creativity. By infusing the design with a playful personality specific to Galaxy Digital, we have achieved a remarkable transformation," said David McWilliams, CEO of JRM Construction.

The elevator lobby is one of the standout features that propelled this project to win the 2023 NYCxDDesign Award for Best Tech Office. Its low-resolution media ceiling displays text from cryptocurrency's founding document, scrolling across the screen in a Star Wars-style crawl, making it a recognizable and immersive experience.

JRM Construction, implementing Young Projects's design, employed a series of design strategies to achieve the desired outcome that brought a fresh perspective to the office. Using lighting, semi-transparent metal chains, and tactical signage created a visual experience while promoting transparency and encouraging idea-sharing between different teams and departments.

The project's centerpiece is the lobby area, where JRM Construction and Nathan Frey Plaster innovated cast plaster panels with a non-repetitive pattern and monolithic relief.

By incorporating color and materials strategically, the project used projected geometry to guide employees through the open office plan, creating dynamic pathways and reinforcing the sense of a connected and collaborative environment.

JRM Construction's commitment to realizing the client's vision has resulted in an office space that inspires and energizes employees while reflecting the forward-thinking culture of Galaxy Digital.
