

Consigli awarded 2023 Best Project of the Year for Bronx High School of Science

December 12, 2023 - Owners Developers & Managers

Bronx, NY Consigli's Bronx High School of Science – Stanley Manne '52 Institute of Science has been honored by Engineering News Record (ENR) as a 2023 New York Best Project of the Year. It received top honors in the K-12 Education category.

The 10,000 s/f facility, designed by Dattner Architects, provides Bronx High School of Science students with university and corporate quality research lab spaces outfitted with new, modern equipment. Consigli's project team overcame obstacles during construction related to design changes and supply chain issues by coordinating material releases and working with subcontractors for schedule flexibility.

In compliance with New York City's Local Law 97, which requires most large buildings to meet new energy efficiency and greenhouse gas emissions limits by 2024, the Stanley Manne '52 Institute eliminates use of fossil fuel burning equipment. The structure is one of the first fully electrified laboratory buildings in New York City, with an impressive energy use index registering far below that of peer buildings using the International Institute for Sustainable Laboratories benchmarking.

In addition to receiving this New York regional honor, Consigli also received ENR New England's top award in the Higher Education/Research category for its work on Bowdoin College's John and Lile Gibbons Center for Arctic Studies and Barry Mills Hall.

Project teams recognized by ENR's panel of judges as regional Best Project winners were evaluated on how they were able to overcome challenges, contribute to industry innovation and benefit the

community, as well as overall excellence in design, construction and safety execution.
